

CHECKLIST: HOW DO YOU FIND THE RIGHT COMPANY FOR ASSEMBLING COMPONENTS?

If your company wants to outsource the assembly of components, the search for a reliable partner begins. Does outsourcing assembly pay off for you? If you can generally answer this question in the affirmative, then the following checklist can help you to find the right outsourcing provider.

- Economic benefit given?
- Does the provider have enough capacity for your requirements?
- Do you have a contact person who will discuss your project with you personally?
- Are process plans and milestones set?
- Are the plans realistic in terms of time horizon and requirements?
- Is the company certified for special industries such as medical technology, if applicable?
- Can prototypes be created?
- Is series production possible in the desired number of pieces?
- Can the company comply with the necessary quality requirements and carry out quality assurance?
- Is the potential partner handling your project discreetly and professionally?
- Can relevant references be shown?
- Does the company offer other services that you would like to use (for example, material procurement, warehousing, etc.)?
